ABOUT THIS DECK

CONFIDENTIAL

- This was a first pass at a pitch deck created in January of 2025.
- A lot has changed since then.
- This is the deck most of the original investors have seen.

THE FOLLOWING SUGGESTIONS WERE MADE IN A MEETING TO DUSCUSS THE 2025 DECK

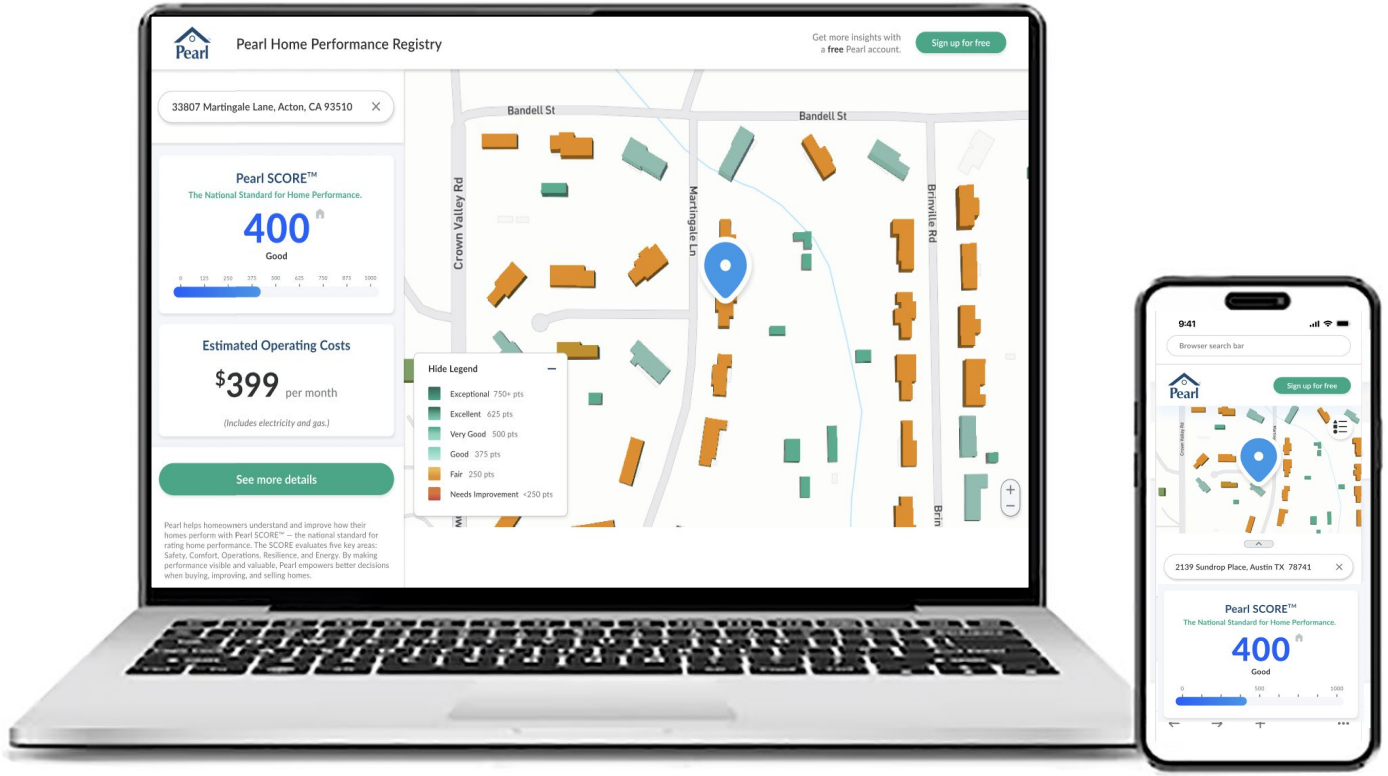
- **Split the product/pricing slide into two**: one consumer-focused (free score, paid report only) and one institutionally focused (API, data partnerships like ICE). Signal early partnership names where possible.
- **Update the competition slide**: reflect that AI itself may be the biggest competitive threat, not just named competitors.
- **Reframe the Carfax playbook slides**: move precedent/analogy slides to the appendix; replace them in the main deck with a forward-looking AI + dynamic standards slide showing Pearl's moat (dynamic standards, dynamic home data from users, evolving algorithms).
- **Add an AI positioning slide**: embrace AI as part of Pearl's vision (not just a threat), crisply answering "what is your relevance in an AI world?"
- **Move the flywheel from the appendix into the body of the deck** near the moat discussion; then show it again on the go-to-market slide to illustrate how Pearl is actively feeding the flywheel (real estate program, ILS, institutional partners).
- **Update the traction slide** with latest metrics and progress.
- **Revisit the financial/revenue slide** with Sandy and Randy to reframe.
- **Update TAM numbers**: adjust from 87M to 92–93M homes; note 4M (not 5M) homes transacting annually.
- **Show redline/before-after changes** in the deck revision so Sandy can see what changed from the prior version.

CONFIDENTIAL

A Billion Dollar Blind Spot

Today, property is bought, sold, and financed with no insight into the value of the home's performance, that is its indoor air quality, comfort, utility costs, resilience, or sustainability.

Pearl changes that – we've modeled and score the performance of every single-family home in America to create the nation's first standardized home performance registry.



FICO score tells us about the homebuyer…
Pearl SCORE tells us about the home

A Massive Market Opportunity

Over $3 Trillion in transactions annually

Resale transactions & lending:

Products: Analytics API, Pearl SCORE Report, Certification

$2.5 Trillion in annual mortgage originations

90 Million homes

5 Million sold annually

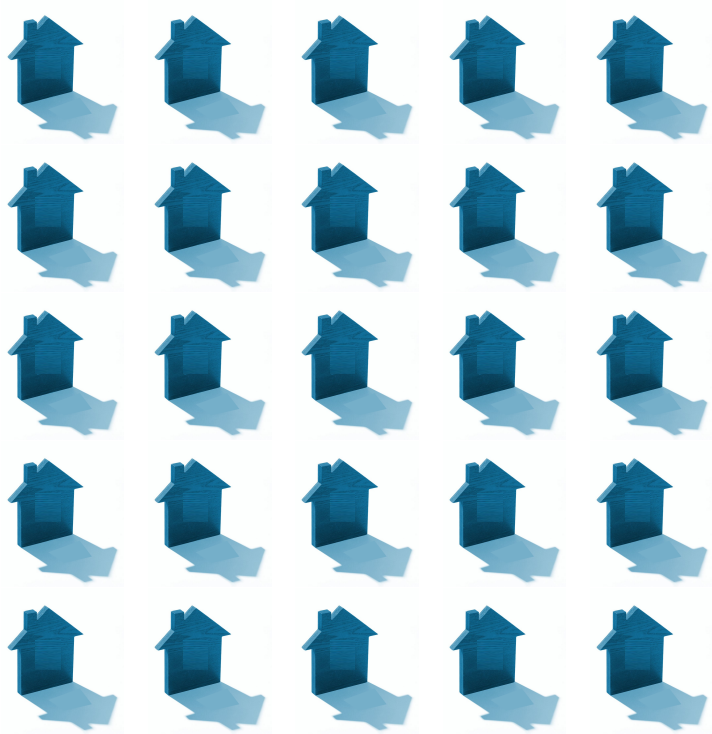
Home improvement & lending:

Products: Analytics API, Pearl app, Home Improvement Plan, Certification

$550 Billion spent annually on home upgrades

$30 Billion in HELOC originations

25 Million high-performing features installed annually



CONFIDENTIAL

Pearl Makes Home Performance Visible & Valuable

Aggregation

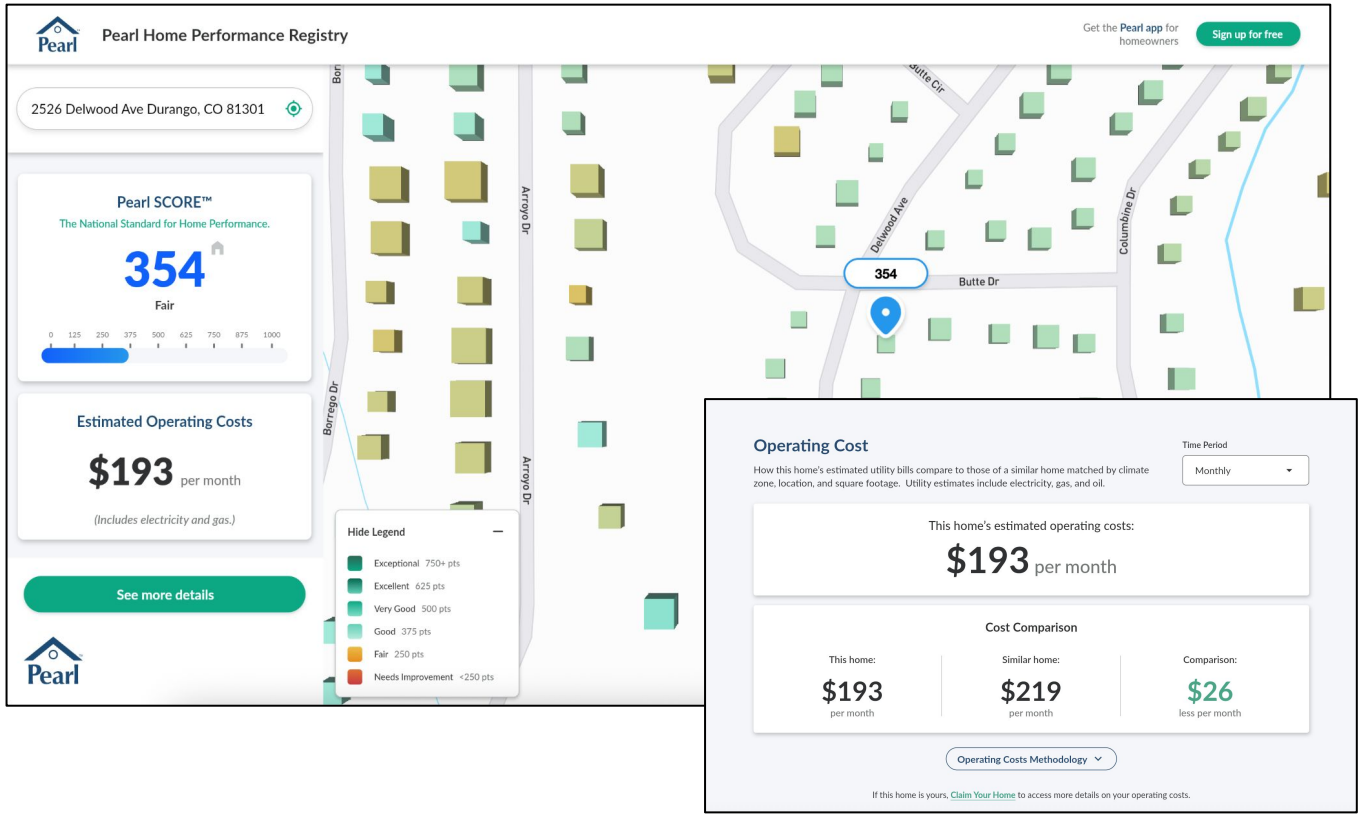
Today, performance data is outdated, incomplete, and scattered across thousands of databases — none of which speak to each other. Pearl's aggregates thia disparate home performance data for the first time, providing comprehensive home performance analytics.

Standardization

There are hundreds of standards used to assess various aspects of home performance today. Pearl SCORE™ draws on these to creates a single, universal metric for home performance comparable across the entire housing market.

Accessibility

Pearl has placed this information on a public registry that transforms complex technical information into clear insights that are relevant, easily understood by homeowners, and actionable.

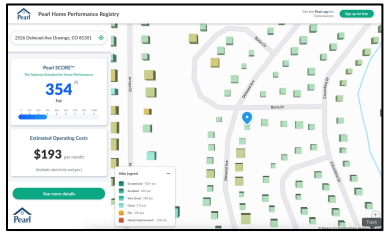


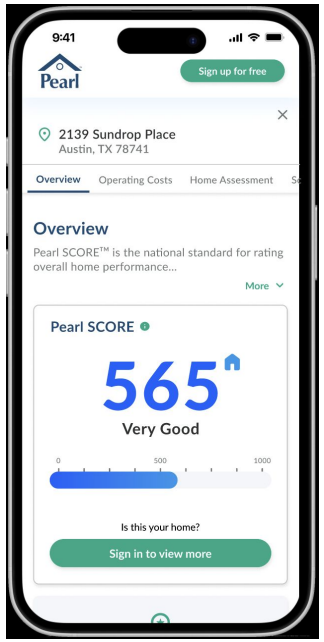
We've modeled the performance of 90M+ US homes

CONFIDENTIAL

Our Home Performance Products Meet the Needs of Sellers, Buyers, Improvers, and B2B Customers

Pearl SCORE / Registry	Pearl App	Pearl SCORE Report	Home Improvement Plan	High-Performance Home Certification	Pearl API
Freemium	Freemium	$49	$49	$99	Access Fees
Standardized home performance metric calculated for every home in the US.	Consumer-facing app to educate, collect data, and provide products and services.	Custom report for sellers and buyers that details performance features.	Custom report for owners with steps, specs, and costs of performance upgrades.	Custom certification of the home's achievement of high-performance status.	Data integrations for real estate, credit, home improvement, utility, insurance, and others.





Pathway to High Margins and Profitability

CONFIDENTIAL

Pearl

At scale, Pearl will achieve:

>XX% Margins

Profitability in <XX months

Rapid YoY revenue growth

- XXX%+ CAGR (Y1-Y3)
- XXX% CAGR (Y4-Y5)

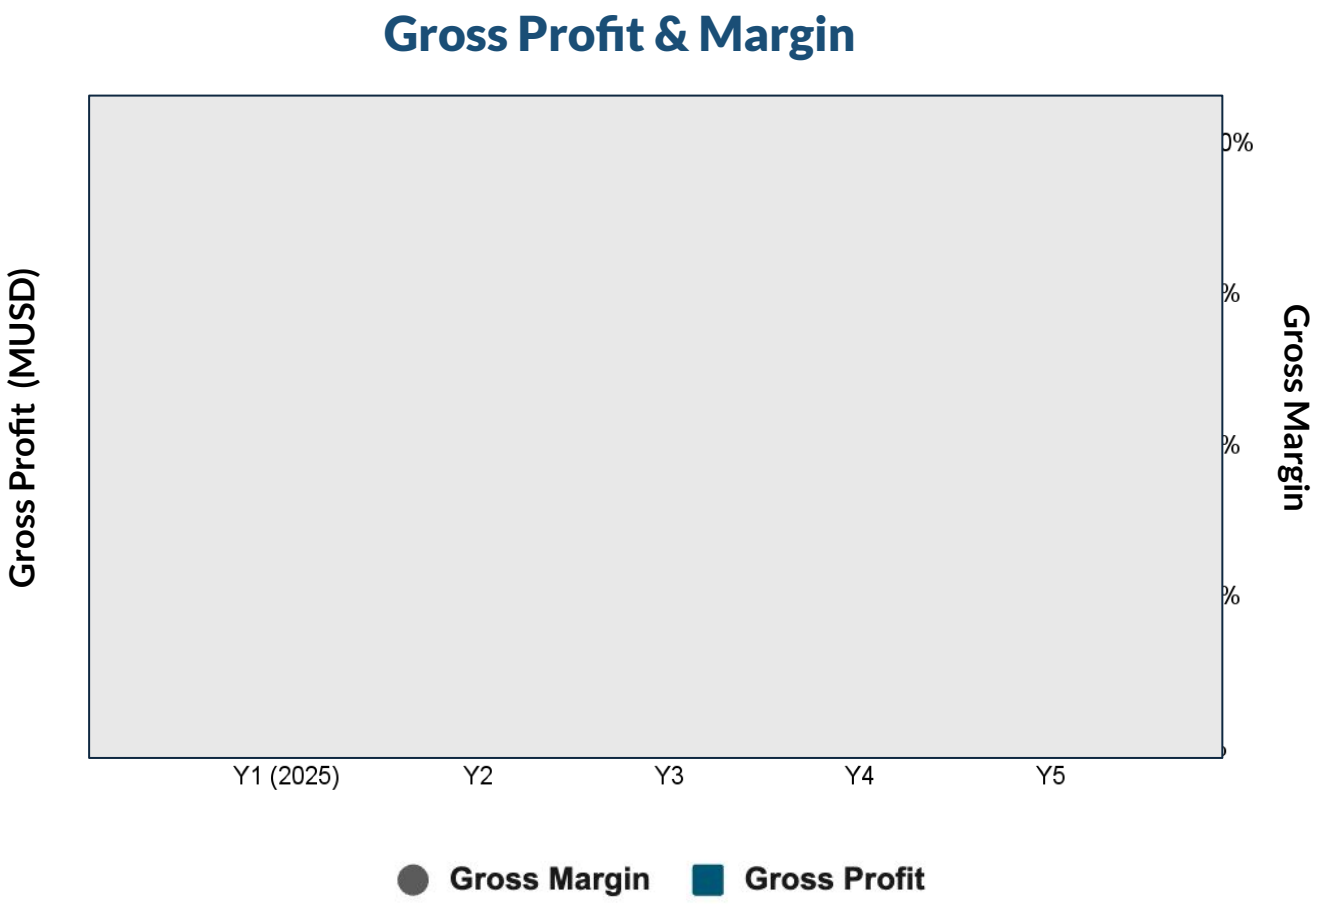
Three key revenue streams:

- Consumers
- Business Partners
- Enterprise Performance Analytics

Channel partners fuel scalable growth

Business customers pay for services, co-market Pearl, and drive customer acquisition.

These partnerships reduce customer acquisition costs (CAC) and accelerate adoption.



Pearl vs. the Competition

CONFIDENTIAL

While other companies focus either on home energy use *or* climate risk, Pearl's products do both - and more.

Our interactive app provides homeowners with information and services, as well as a path to update their SCORE.

Pearl's Key Competitive Advantages

CONFIDENTIAL

Pearl

Recognized expertise, best-in-class modeling, and unique data

Pearl controls its core technology stack – significantly reducing third-party dependencies and improving margins.

The registry leverages patent-pending AI-driven modeling and real-time market analytics to deliver predictive, investment-grade intelligence.

This enables scalable monetization across B2B and B2C markets, unlocking new value streams in real estate and home improvement transactions and creating formidable barriers to entry.

Pearl's Go-to-Market Approach

CONFIDENTIAL

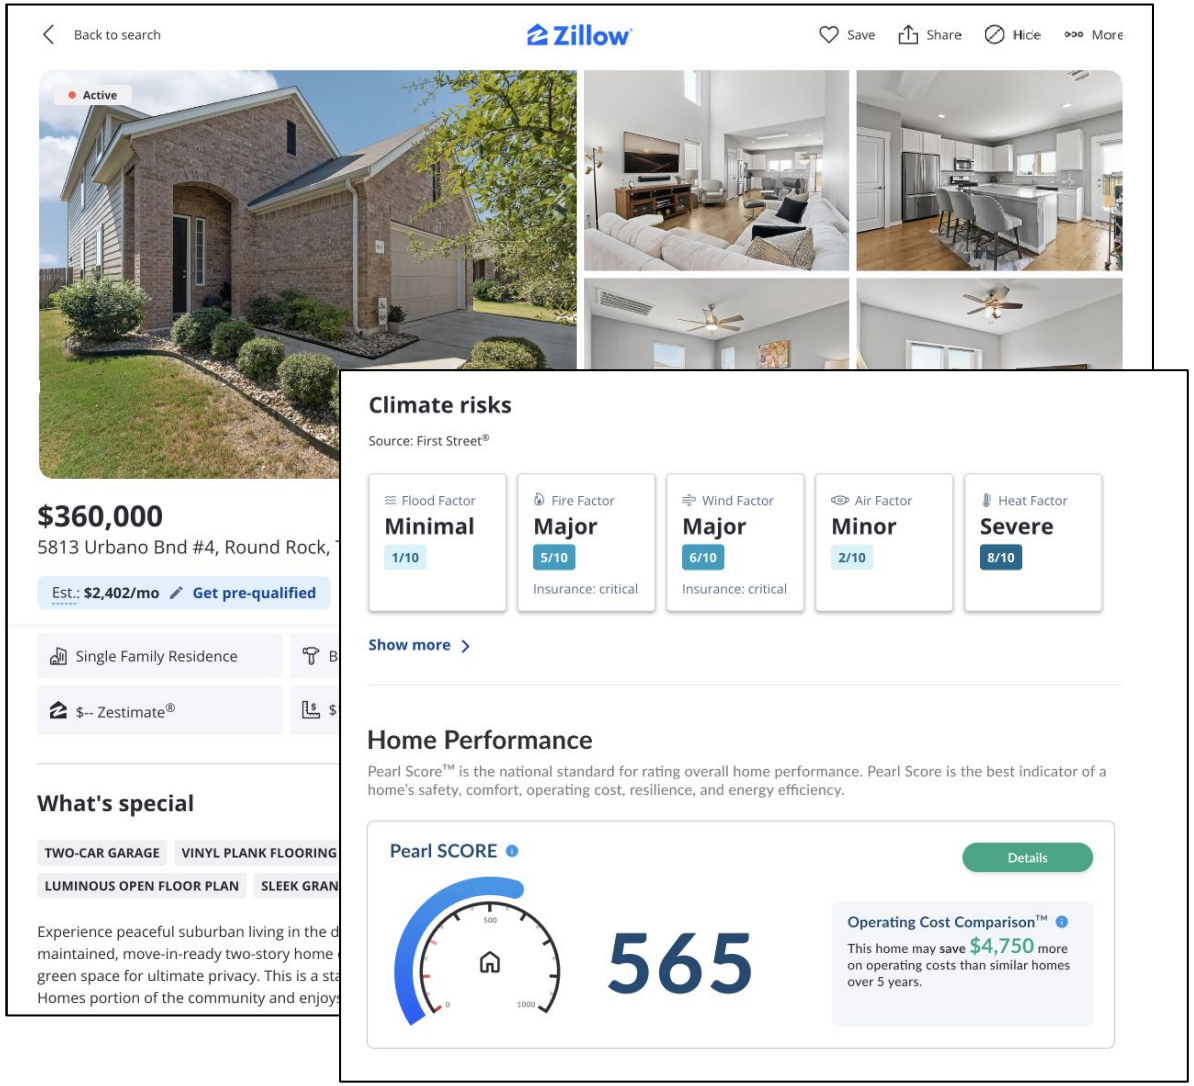
Pearl

The homebuyer is our wedge customer, and real estate platforms our leverage point for the flywheel:

88% of buyers today spend $300 - $500 on home inspection reports which do *not* include info on performance

Buyers can be reached through buyer listing portals (Zillow, REALTOR.com), broker sites (Redfin, Compass), and multiple listing services

Buyers use Pearl's app to compare homes' performance and access information on total cost of homeownership, converting to owners using our app post-sale

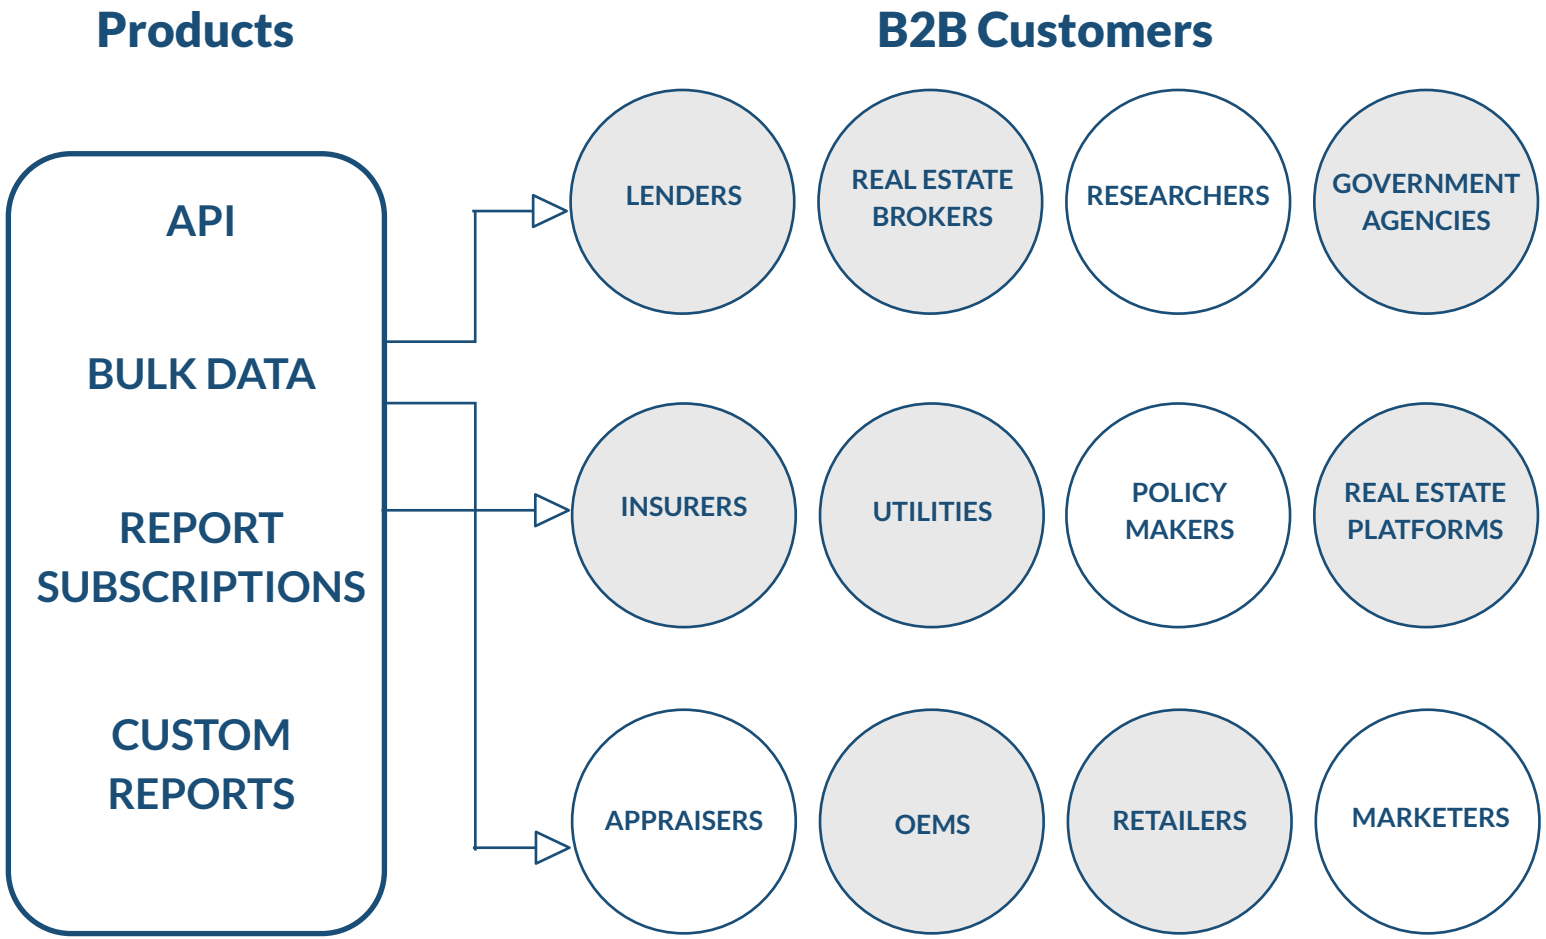


Huge SaaS Revenue Opportunities

CONFIDENTIAL

Pearl

Proprietary home performance data collected in our app is aggregated to serve enterprise customers through insights and analytics at the portfolio and address level



Pearl's data is proven to be indicative of loan performance, insurance claim risk, energy use, and can be used for targeted consumer marketing

Company Traction

CONFIDENTIAL

Pearl

Vetted, Proprietary Home Performance Scoring System

U.S. Dept. of Energy and ENERGY STAR approved for use in the federal ENERGY STAR Home Upgrade program.

Industry Buy In: Real Estate, Home Improvement, & Public Sector

- **Real Estate:** data field in Real Estate Standards Organization MLS data dictionary; NAR is Pearl investor; independent appraiser studies show a 5% premium for Pearl Certified homes.
- **Home Improvement:** Successful heat pump pilot with LG and expanding nationally; 140+ contractors license Pearl for their installs today; 250K+ Pearl Certified homes.
- **Public Sector:** Written into national legislation - under contract with GA and HI, in contract negotiations with other states to provide certification as required by IRA rebate programs.

We know how to build and bring to market a product that serves the broader ecosystem to create a network effect for scale.

Investment Opportunity

Pearl SCORE Categories

CONFIDENTIAL

These attributes contribute most to a home's performance: Safety, Comfort, Operations, Resilience and Energy

S Safety

A safe home has features to ensure the home has high indoor air quality (IAQ), reducing risk associated with allergies, asthma, and even cancer. These features prevent outdoor pollution, allergens, and/or radon from entering the home; remove dust and contaminants from the air; and/or prevent mold and other issues by removing excess moisture from bathrooms, kitchens, and basements.

C Comfort

A comfortable home has features that eliminate drafts and provide pleasant and consistent temperature and humidity from the basement to the attic all year long. Indoor air is neither too dry nor damp, and thermostats are typically in "set-and-forget" mode. The home is also protected from outdoor noise pollution, creating a quieter environment for its occupants.

O Operations

A home that operates efficiently uses less energy than similar homes to achieve the same benefits. Features that make the home more efficient include insulation levels that meet modern energy codes, air and duct sealing, and ENERGY STAR appliances (water heating, heating and cooling, etc.). Greater efficiency means lower utility bills. These homes may also have low-flow water features which help lower water costs.

R Resilience

A resilient home is one that includes features to protect it and its occupants from extreme weather events such as hurricanes, floods, extreme heat and cold, and wildfires. Today, Pearl's Resilience category focuses on resiliency-related extreme temperature and loss of power. We are working to expand this category to include the features that make homes resilient to other natural disasters, such as wildfires and floods.

E Energy

A home that manages its energy needs more effectively and independently will score high. This means the home generates part or all of its power through solar panels that may be stored in a home battery for later use. The home may also be wired to provide at-home EV charging and/or have a smart panel that may enable grid interactivity and advanced energy monitoring, and management capabilities.

Examples of features evaluated in a Home's SCORE

Ventilation, Air Sealing, Water Heater, Heat Pump, HVAC Filters

Heat Pump, Heating System, Attic Insulation, Distribution Systems, Windows

Attic Insulation, Heating, Cooling, Water Heating, Clothes Dryer

Roofs, Walls, Floors & Foundations, Landscape

Energy Storage, Solar Inverter, Solar Panel & Array, EV Charger, Smart Electric Panel
